MORE TRENDS
3/22/2018

These were the Trends spotted during the Philvencap forum (#340) on Thursday, 3/22/2018, at AIM, 7:00 to 9:00 am.

The session on Trends was supposed to be canceled because of a discussion on the ACCESS@AIM Laboratory Launch last March 8, 2018.

I made a presentation based on 3 pages of materials that were given to us during the March 8th inauguration.

I had a little more time and we had quite a few new attendees so I decided to go into Trends. I was only able to handle one trend.

1. There seems to be more events, machines, software, systems using robotics and artificial intelligence including Chatbot technology (using algorithms, big data and blockchain).

   ESI Note:

   There were a lot of people who did not understand this and during the next few meetings we ,ust have Dr. Chris Monterola and Erica Legara speak at Philvencap and give a presentation on algorithm, big data and blockchain.

   Business Opportunities:

   *create a company with a software specializing on all possible clients that come to use in programming the robots
   *these are mechanical robots, including maintenance and assembly
   *a company dealing in analytics going into business intelligence that can be used by the business community and social organizations
   *a company to retrain people to adjust to the new BPO technology/practices and go into the new BPO ways in the Philippines
   *extract deutherium from the seas around the Philippines so we can use these to produce energy and also to be used in robotics and artificial intelligence

Trend Spotter: Remigio Iringan, Jr.
